```python
# Silver to Gold
# 1. Aggregated Metrics
# 2. KPI's and Dashboards
# 3. ML Feature Store
# 4. Buisness Logic
from pyspark.sql import SparkSession
from pyspark.sql import functions as f
from pyspark.sql.window import Window

# Variables
catalog = "new_databricks_workspace"
schema = "default"
# Create SparkSession
spark = SparkSession.builder.appName("Spark Dataframe").getOrCreate()

# Read Silver Info
silver_info = spark.table(f"{catalog}.{schema}.silver_athlete_information")
silver_results = spark.table(f"{catalog}.{schema}.silver_athlete_results")
silver_combined = spark.table(f"{catalog}.{schema}.silver_athlete_combined")
```

```
silver_combined: pyspark.sql.connect.dataframe.DataFrame = [athlete_id: integer, firstname: string ... 15 more fields]
silver_info: pyspark.sql.connect.dataframe.DataFrame = [athlete_id: integer, firstname: string ... 8 more fields]
silver_results: pyspark.sql.connect.dataframe.DataFrame = [athlete_id: integer, rank: integer ... 6 more fields]
```

3 days ago (2s) 2: **Gold: Athlete Career Stats**

```python
# Gold - General Carrer Stats
# Filter out null ranks
gold_general_carrer = silver_combined.filter(f.col("rank").isNotNull()).groupBy(
    "athlete_id", "firstname", "lastname", "gender", "country",
    "height", "arm_span", "paraclimbing_sport_class", "birthday"
).agg(
    # Total competitions climbed
    f.count("*").alias("total_competitions"),
    # Total seasons climbed
```
